

Software Requirements Specification (SRS)

1. Introduction

1.1 Purpose

This document defines the Software Requirements Specification (SRS) for a web-based application designed to connect travelers with travel agencies. The platform will allow users to discover travel agencies, browse and book trips posted by those agencies, and manage trip-related interactions online.

1.2 Scope

The system is a web application that serves two primary user groups: - **Travelers** who want to explore, compare, and book trips - **Travel Agencies** who want to list their agency profiles and post trips

The platform will act as a marketplace and discovery portal for travel services.

1.3 Definitions, Acronyms, and Abbreviations

- **SRS**: Software Requirements Specification
- **UI**: User Interface
- **UX**: User Experience
- **Admin**: System Administrator

1.4 Overview

This document describes overall system functionality, user roles, functional requirements, non-functional requirements, and system constraints.

2. Overall Description

2.1 Product Perspective

The application will be a centralized web platform accessible through modern browsers. It may later integrate with payment gateways, map services, and notification systems.

2.2 Product Functions

- User registration and authentication
- Travel agency registration and verification
- Trip posting and management
- Trip search and filtering
- Trip booking request system
- Reviews and ratings
- Admin moderation and management

2.3 User Classes and Characteristics

2.3.1 Travelers

- General users
- Can browse agencies and trips
- Can register and book trips

2.3.2 Travel Agencies

- Business users
- Can create agency profiles
- Can post, update, and manage trips

2.3.3 Admin

- System administrators
- Manage users, agencies, trips, and content

2.4 Operating Environment

- Web browsers (Chrome, Firefox, Edge, Safari)
- Responsive design for desktop and mobile
- Backend hosted on cloud infrastructure

2.5 Design and Implementation Constraints

- Must comply with data privacy laws
- Secure authentication and data storage
- Scalable architecture

2.6 Assumptions and Dependencies

- Users have internet access
- Travel agencies provide accurate information
- Payment integration may be added in future phases

3. Functional Requirements

3.1 User Authentication

- Users shall be able to register using email and password
- Users shall be able to log in and log out
- Password reset functionality shall be provided

3.2 Traveler Features

- Travelers shall be able to browse travel agencies
- Travelers shall be able to search trips by destination, date, price, and duration
- Travelers shall be able to view trip details
- Travelers shall be able to send booking requests

- Travelers shall be able to rate and review agencies and trips

3.3 Travel Agency Features

- Agencies shall be able to register and create a profile
- Agencies shall be able to post new trips
- Agencies shall be able to edit or delete trips
- Agencies shall be able to view booking requests
- Agencies shall be able to manage trip availability

3.4 Admin Features

- Admin shall be able to approve or reject agency registrations
 - Admin shall be able to manage users and agencies
 - Admin shall be able to remove inappropriate content
 - Admin shall be able to view system reports
-

4. Non-Functional Requirements

4.1 Performance Requirements

- The system shall support concurrent users
- Pages shall load within acceptable time limits

4.2 Security Requirements

- User data shall be encrypted
- Secure authentication mechanisms shall be used
- Role-based access control shall be implemented

4.3 Usability Requirements

- The UI shall be simple and intuitive
- The system shall be accessible on mobile devices

4.4 Reliability and Availability

- The system shall be available 24/7
- Regular backups shall be maintained

4.5 Scalability

- The system shall support future growth in users and data
-

5. External Interface Requirements

5.1 User Interfaces

- Web-based graphical interface
- Responsive design

5.2 Software Interfaces

- Payment gateway (future)
 - Email notification service
 - Map and location services
-

6. Future Enhancements

- Online payment and booking confirmation
 - Mobile application
 - AI-based trip recommendations
 - Chat between travelers and agencies
-

7. Approval

This document serves as the baseline for system design and development.
